ABOUT ALNAHRAIN

Built on experience. Focused on fire safety.

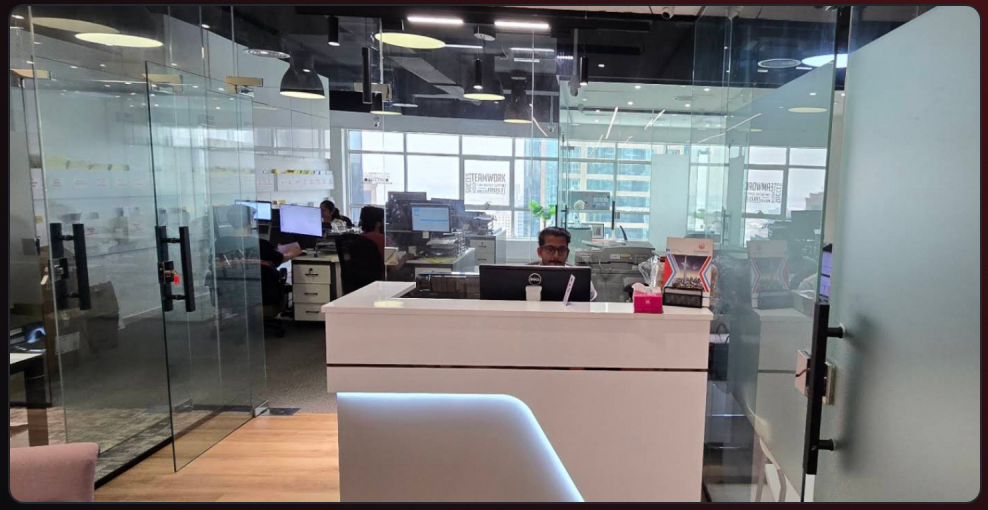

Alnahrain Security & Safety has designed, supplied, installed and maintained fire detection and fire protection systems in the UAE since 1997.

Based in Sharjah with a branch in Dubai, we work with developers, retailers and businesses across Sharjah, Dubai and the Northern Emirates.

Each system is designed around the client's building and risk, and supported by inspection, training and maintenance.

MULTI-SECTOR EXPERIENCE

Healthcare · Hospitality · Education · Government · High-rise · Industrial

COMPETITIVE ADVANTAGES

Reasons to deal with us.

01

Multinational technicians

With proven UAE field experience.

02

Dedicated maintenance engineers

Technical ownership on site.

03

Dedicated maintenance controllers

Coordinating AMC schedules and response.

04

Multi-brand service

Fire alarm and emergency lighting service capability.

500+

AMC projects

Under annual maintenance contracts.

05

In-house workshop

Supporting fabrication and service work.

06

A+ registered

A company with client appreciation certificates.

01 · ENGINEERING & DESIGN

Designed around your building.

Practical, compliant layouts for fire detection and fire protection systems. We design around how a facility is used, including occupancy, risk zones and operational constraints, so installation and approval paths stay clear.

Our engineering work covers system selection, device layouts, cause-and-effect logic, and documentation that contractors and authorities can use.

TYPICAL SCOPE

- Fire detection system design and specifications
- Fire protection and suppression concept design
- Shop drawings and installation documentation support
- Coordination with consultants, contractors and facility teams

02 · SERVICE & MAINTENANCE

Fire AMC and planned service.

A fire system only protects people and assets when it is maintained. Annual maintenance contracts and planned service for Sharjah and Dubai, for systems we installed and for existing installations.

HOW CIVIL DEFENSE AMC WORKS

1 **Survey & scope** Review installed systems and define AMC coverage.

2 **Planned visits** Inspect, test and report on an agreed cycle.

3 **Rectify & document** Faults quoted and fixed with approval; records kept.

4 **Inspection support** Systems and paperwork reflect the maintenance performed.

SYSTEMS COVERED

- Detection and life safety
- Water-based protection
- Special hazard systems

03 · TURNKEY PROJECTS

One team from package to handover.

A single accountable partner delivers a working fire system, avoiding gaps between handovers. Supply, installation, testing and commissioning are coordinated so the facility gets a system ready for operation and authority review.

01

Supply

Specified detection and protection equipment.

02

Installation

Qualified site teams.

03

Testing and commissioning

Including cause-and-effect verification.

04

Handover

Documentation and handover support.

04 · FITOUTS & RENOVATION

Fire protection when spaces change.

Fitouts and renovations move ceilings, partitions and services, so sprinklers, detectors and related fire systems must be adjusted to stay compliant. We handle the fire protection side so life-safety coverage matches the new layout.

TYPICAL SCOPE

- Relocating, modifying and reinstating sprinkler heads during fitouts
- Updating fire detection for new ceiling and partition layouts
- Coordinating with fitout contractors and MEP teams on live sites
- Testing and handover so protection matches the renovated space

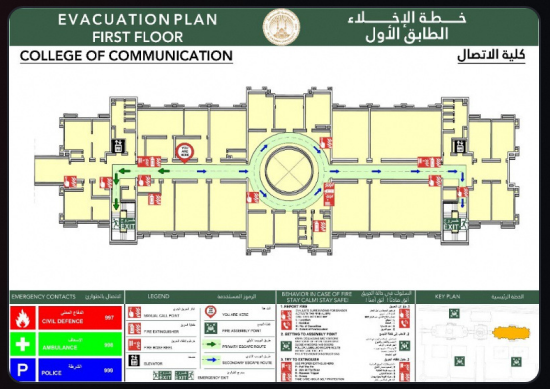

05 · EVACUATION PLANS

Evacuation plans and assembly points.

Clear routes, compliant signage and bilingual plans that people can follow under pressure. We prepare floor-by-floor evacuation plans and outdoor assembly point signage for universities, government buildings, commercial facilities and industrial sites.

ALIGNED WITH

- NFPA guidance on means of egress and life-safety communication
- UAE Fire & Life Safety Code of Practice
- Dubai and Sharjah Civil Defense expectations

WHAT YOU RECEIVE

Plans: bilingual floor drawings, primary and secondary escape routes, “You Are Here” markers, extinguisher, hose reel and call point locations, emergency contacts and a site key plan.

Assembly points: location assessment, compliant signage, professional mounting, and handover ready for audits and drills.

DIGITAL OPERATIONS

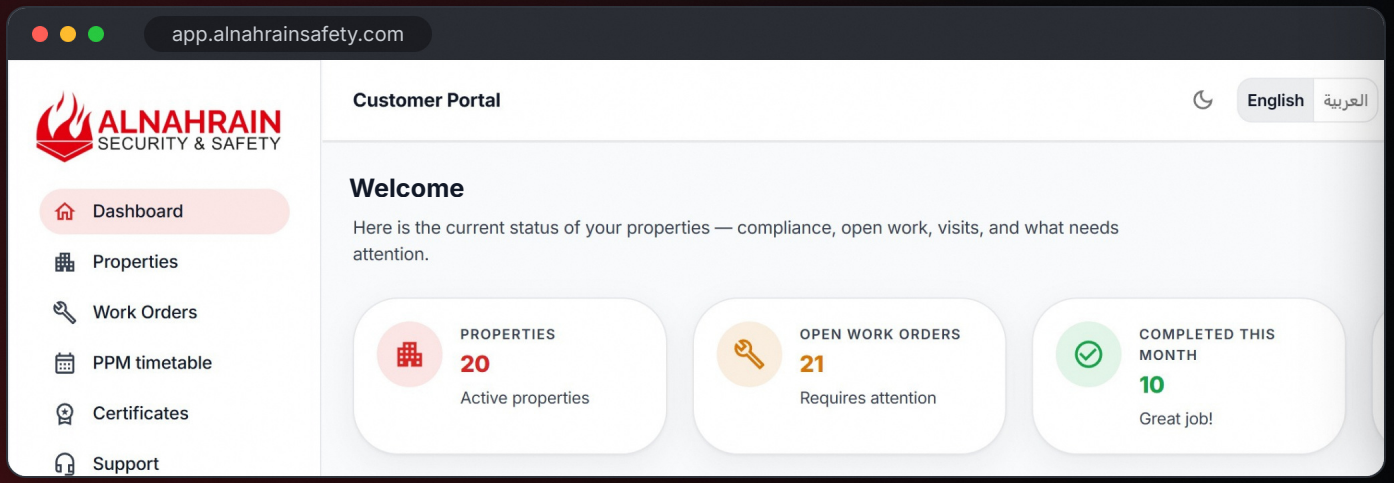

Our operations platform, now open to clients.

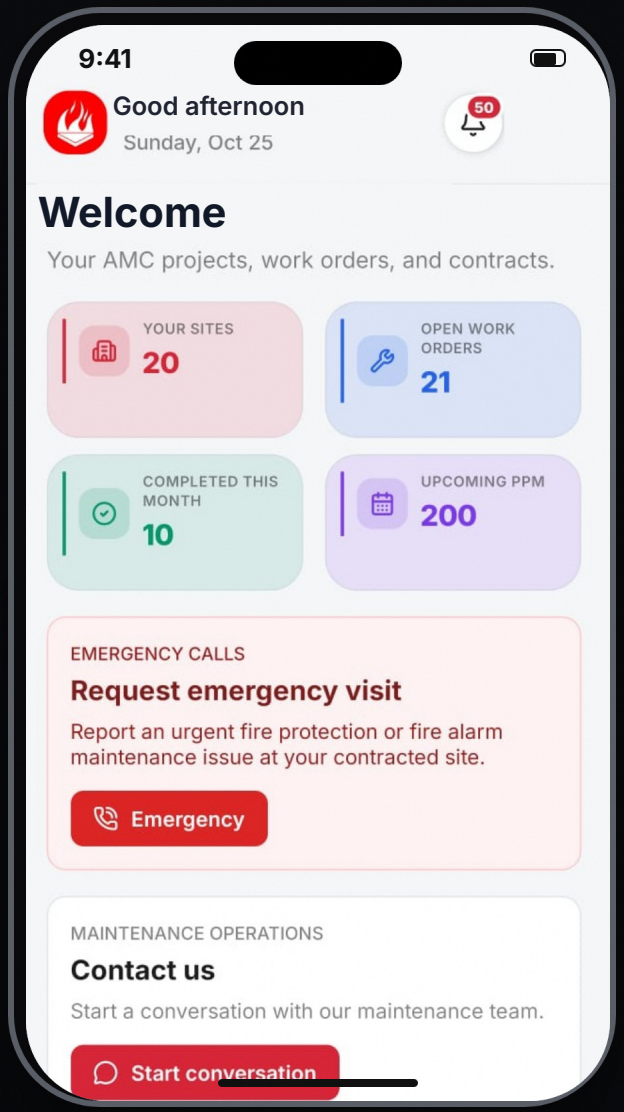

Alnahrain runs its operations on a purpose-built web and mobile platform. Clients get access through a customer portal on the web and in our Android and iOS apps.

- View work orders
- Download reports
- Emergency calls
- Monitor Civil Defense compliance
